

Python for Informatics

Assignment 1

“Mean”

Description:

Create an IPython Notebook file that performs the following:

1. Provide two or more headers, using the *Markdown* cell mode with leading '#'s at the beginning of your text, specifying the assignment title and your name.
2. Prompt the user, and receive input from the user for five floating point numeric values. You should use five *cells* to accomplish this.
3. Calculate and present (i.e., *print*) to the user the floating point mean value.

Deliverable:

One IPython Notebook file, submitted as an attachment at our course shell assignment page.

Submission Deadline:

Please see the course schedule in our syllabus for all assignment submission deadlines.
