

PyWeather - 3 Observations

John M Warlop

O
N
E

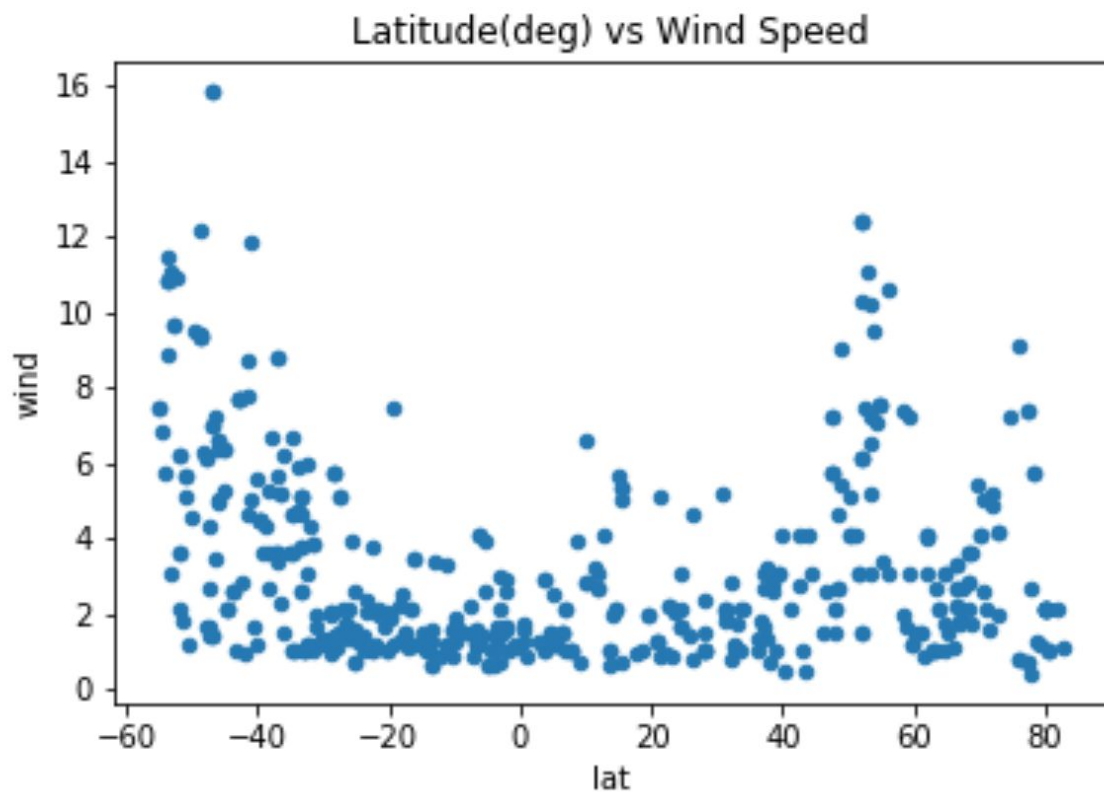

Temperature is highest at the equator and lower toward the poles. Earth's tilt most likely has something to do with this. In addition, weather stations exist much farther North in terms of latitude than the furthest weather station South.

T
W
O

The wind speed increases as you move toward the poles. Higher speeds are seen in the Southern hemisphere.

Weather stations report percent cloudiness in 5% increments.
